2. Remove face nut (Item 4).
3. Turn drive screw 3 to 4 turns clockwise to raise split thrust washer on drive screw assembly slightly above the face of the hydrant.
4. Grasp the drive screw and pull outward. The drive sleeve, rod and plunger should slide easily.
5. Mark the position of the plunger (Item 9) on the operating rod (Item 3). Unscrew and discard the old plunger from the operating rod.
6. Screw the new plunger onto the rod at the same position as the old plunger. Use thread locking compound (such as “Locktite”) when installing the new plunger onto the rod.
7. Replace the O-ring (Item 5) on the drive sleeve (Item 10).
8. Replace the drive screw, drive sleeve, operating rod, plunger, retainer seal and face nut. Tighten the face nut snugly. Do not over tighten.

8600 Series (14" and longer) / 8602 Series (All)

REPAIR INSTRUCTIONS

1. With water supply turned off, open hydrant to full open position (rotate key 5 to 6 turns counter-clockwise).
2. Remove face nut (Item 4).
3. Turn drive screw 3 to 4 turns clockwise to raise thrust washer slightly above face of hydrant.
4. Using (2) screwdrivers, pry between the thrust washer (Item 2) and face of hydrant until the mechanism inside releases. NOTE: This does not require great force. The mechanism inside will release with only ¿ " to ¼" of movement.
5. Grasp the drive screw and pull outward. The drive sleeve, rod and plunger should slide easily.
6. Unscrew the old cartridge assembly from operating rod and discard entire cartridge assembly.
   DO NOT REUSE A CARTRIDGE ONCE IT HAS BEEN FULLY INSTALLED. THE RETENTION FINGER SNAPS WILL NOT RETAIN THE ASSEMBLY IN THE VALVE BODY AND WILL CAUSE PREMATURE FAILURE OF THE VALVE MECHANISM.
7. Screw a new cartridge assembly onto rod until plunger is within
   last three threads, (See Fig. 2)
8. Replace the O-ring on the drive sleeve (Item 3).
9. Reassembly the drive screw, drive sleeve, operating rod, cartridge assembly. Insert this assembly into the hydrant with the square of the drive sleeve aligned with its square bore. Grasp the head of the drive screw with pliers and gently push and pull the assembly to check for cartridge finger snap engagement. You should be able to push and pull the drive sleeve easily back and forth approximately ⅉ ” between hard stops at each end of the stroke. If the entire assembly comes back out when you pull during test, the cartridge is screwed too far onto the rod. Unscrew the cartridge one revolution and reinsert and push/pull test again for proper engagement.
10. Unscrew the drive screw from the sleeve. Install nylon retainer seal, drive screw, and face nut. Operate hydrant fully open and closed to check for normal operation.
11. Turn water supply on and operate hydrant to verify proper operation and shut-off.
    NOTE: After closing, it may take a minute or so for the body cavity to drain completely. Allow drain-down time before you check for slow leaks.

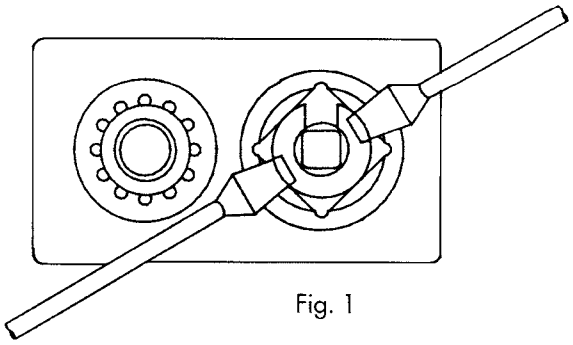

Fig. 1

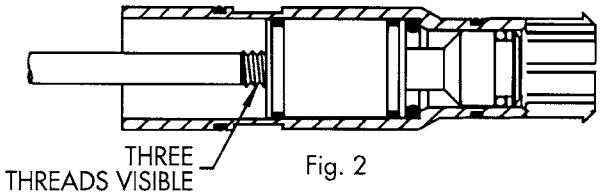

Fig. 2

NOTE: Water flow should begin when key is turned 2½ to 3½ full turns. If not, this indicates that the cartridge is screwed too far onto operating rod. To correct, repeat steps above and when disassembled, unscrew the cartridge from operating rod 1˚ turns. Re-lubricate o-rings with vaseline or Parker O-Ring lube, reassemble and test hydrant. Water flow should occur at normal opening position.

1

Wade hydrants seldom require maintenance. However, continuous drainage from the outlet is a signal that inspection and possible replacement of the sealing parts is in order.

2

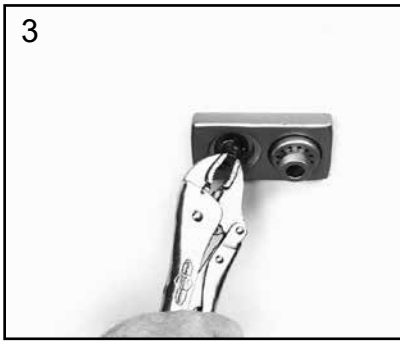

The procedure for maintenance is as follows:

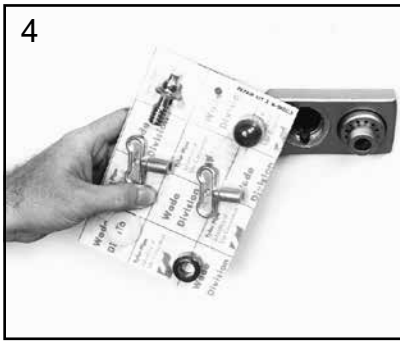

1. Shut off water supply to the hydrant and turn the hydrant on to relieve pressure.
2. Remove the stem bushing nut by turning counterclockwise with a wrench. Note: Early models of the W-8620, W-8625, W-8630 and W-8635 Enviro/Gard wall hydrants require a Á " Allen hex wrench to remove the stem bushing nut. For later models use a 1À " socket.
3. Firmly grasp the worm stem with grip pliers and pull toward you.
4. Replace worm parts with new parts as required. Several repair kits containing all parts necessary for this maintenance are available. Refer to pages 4-29 for hydrant identification and required repair kit.
5. Reassemble hydrant, reversing the procedures in steps 1-4. Use a silicon lubricant on all neoprene parts to ease assembly.

6 & 7: Photos below show sequence and tools required to take apart the control rod assembly. Left photo shows removal of worm and drain port sleeve; right photo shows removal of plunger.
